

Reflective Summary ChatRoom

Gavin Piva

This application has been extremely helpful in aiding my learning about network programming in Java. It has provided me with a practical example of how to create a multi-threaded server that can handle multiple client connections and enable communication between them in real time.

Through the code snippets provided, I was able to understand the basic concepts of socket programming, including establishing a socket connection, handling I/O streams, and implementing concurrency. I learned about different Java classes and interfaces, such as `ServerSocket`, `Socket`, `BufferedReader`, `BufferedWriter`, and `Runnable`, and how to use them to create a functional network application.

Furthermore, this application helped me achieve several learning goals, such as:

- Understanding the basics of socket programming and network communication
- Implementing concurrency in Java applications
- Developing a multi-threaded server to handle multiple client connections
- Handling I/O streams for communication between server and clients
- Implementing error handling and exception handling in network applications

Overall, this application has been a valuable learning tool for me, and I feel more confident in my ability to develop network applications in Java.
